PLATE I.

N

Photomicrograph of a section of a specimen, showing a granular surface with lighter and darker patches. The object is centered in the lower half of the page, with a dark background. The texture is highly irregular, with many small, bright, irregular spots and patches scattered across a darker, mottled surface. The overall shape is roughly circular but with some irregular edges. The lighting is somewhat uneven, with the right side of the object appearing slightly brighter than the left side.
